

## Is your Crohn's disease active?

You may want to look into our clinical research study available for adults 18 years of age or older with moderately to severely active Crohn's disease.

In this clinical research study we are seeking patients in Australia, New Zealand, Europe, Canada and the United States, to test the safety and effectiveness of the research study medication.

If you have been treated previously with TNF antagonist therapy, but did not find it effective, it lost effectiveness or you were not able to tolerate it, this may be the research study for you.

During the study, you will receive all study required testing, healthcare and the study drug at no cost.

### **Subjects who are eligible to participate in this clinical trial include the following:**

- Men and women 18 years of age or older.
- Have moderately to severely active confirmed Crohn's disease of at least 3 months duration
- Previous treatment with TNF antagonist therapy, that is no longer effective for you
- Be able to attend the study center a total of 11 times over a 9 month period

*\* not a full list of criteria.*
